Pressure sensitive adhesives are popular because of the ease of application. Simply remove the release liner and press the VELCRO® Brand tape in place. Pressure sensitive adhesives should always be considered semi-permanent bonds. VELCRO® Brand pressure sensitive adhesives have been engineered to offer specific performance characteristics to meet different requirements.

Acrylic: Pressure sensitive adhesives offer up to 225°F short-term heat resistance as well as good shear strength and good adhesion to most metal and medium / high surface energy plastics.

Rubber: Pressure sensitive adhesive offers up to 185°F short-term heat resistance as well as good adhesion to low surface energy substrates. They should be used indoors, at room temperature.

Fire retardant: Fire retardant pressure sensitive adhesives are suitable for use in applications requiring certification to industry specifications, such as automotive.

Solvent and Heat Activated Adhesives

Permanent

Solvent and heat activated adhesives, available on most VELCRO® Brand hook and loop tapes, provide the strongest bond to the tape itself and can be made ready for instant bonding by many easy methods of application (e.g. solvent, heat, ultrasonic, dielectric).

Solvent: Solvent activated adhesives are recommended for applications where a more permanent bond is desired. Dry to the touch, these adhesives become tacky upon activation using solvents.

Heat Activated: Heat activated adhesives are recommended for applications where a more permanent bond is desired. Dry to the touch, these adhesives become tacky upon activation using RF welding or ironing.
